New York State Information Technology Guideline	**No:** NYS-G25-001
IT Guideline: **AI System Inventory Guidance Document**	**Issued:** 03/04/2025 **Issued By:** NYS Office of Information Technology Services **Owner:** Chief Data Office

1.0 Purpose and Benefits

The purpose of this guideline is to provide detailed instructions to State Entities (SEs) for the creation and reporting of an Artificial Intelligence (AI) System Inventory to ITS. The objectives of this AI system inventory are to document and maintain records of all AI systems in use across SEs and facilitate public accessibility to select data elements from this AI system inventory to promote transparency, ensure accountability, and foster trust in the use of AI technologies.

2.0 Authority

Section 103(10) of the State Technology Law provides the Office of Information Technology Services (ITS) with the authority to establish statewide technology policies, including technology and security standards. *Section 2 of Executive Order No. 117*[1], issued January 2002, provides the State Chief Information Officer with the authority to oversee, direct and coordinate the establishment of information technology policies, protocols and standards for State government, including hardware, software, security

[1] All references to Executive Order 117 refer to that which was originally issued by Governor George E. Pataki on January 28, 2002 and continued by Executive Order 5 issued by Governor Eliot Spitzer on January 1, 2007, Executive Order 9 issued by Governor David A. Patterson on June 18, 2008, Executive Order 2 issued by Governor Andrew M. Cuomo on January 1, 2011 and Executive Order 6 issued by Governor Kathy Hochul on October 8, 2021.

and business re-engineering. Details regarding this authority can be found in NYS ITS Policy, *NYS-P08-002 Authority to Establish State Enterprise Information Technology (IT) Policy, Standards and Guidelines*.

Section 103-e of the State Technology Law (STL) requires publication of an annual inventory of state agency artificial intelligence systems by ITS by December 30. State agencies are required to submit information to ITS at least sixty (60) days in advance.

3.0 Scope

This guideline applies to all "State Entities" (SE), defined as "State Government" in Executive Order 117 or "State Agencies" as defined in Section 101 of the State Technology Law. This includes employees and all third parties (such as local governments, consultants, vendors, and contractors) that use or access any Information Technology (IT) Resource for which the SE or ITS has administrative responsibility, including systems managed or hosted by third parties on behalf of the SE or ITS.

The AI system inventory will include AI systems, as defined by NYS-P24-001 Acceptable Use of Artificial Intelligence Technologies Policy (AUAI Policy), in use by the SE, whether developed internally or acquired from external sources and used within the operational, analytical, or decision-making processes. Please see the AUAI Policy for further information, including the definition of AI systems and covered use details.

4.0 Information Statement

Per the AUAI Policy and section 103-e of the STL, ITS is responsible for maintaining an inventory of AI systems in use by SEs. To assist in this effort, SEs will be provided access to an Excel workbook to provide information on AI systems currently in use.

4.1 Submission Process

Central to this initiative's success is the role of an SE designated primary and secondary contact responsible for collecting and compiling all required AI system information. This centralized approach will ensure accuracy and completeness in the data collected and significantly reduce the potential for errors and duplications.

The AI system inventory Excel workbook outlines the specific information that needs to be collected and recorded. Once the workbook is complete, the designated primary contact or secondary contact is to email it to the ITS Chief Data Office within 180 days of the issue date of this guideline (*see* Section 8.0 below). The contact information for this office is provided below.

4.2 AI System Inventory Excel Workbook Information

4.2.1 Workbook Structure

The Excel workbook is organized with four separate Excel worksheets:

- Coversheet: This is for entering the primary and secondary contact names and Email addresses, for ITS purposes only.
- Instructions and examples: This is an informational worksheet that provides a data dictionary with column names transposed. It includes rows identifying what data will be collected for public AI inventory reporting, information stating if the data field is a drop-down menu choice or text (key entered), an example for each column heading, and an additional column showing if a field is required or only required if applicable/available.
- Drop-down menu choices and descriptions: This is an informational worksheet only providing the drop-down menu choices and their descriptions for help when completing the workbook. This is also included in Appendix A and B of this document.
- AI inventory worksheet: To be used to enter AI system inventory records. This worksheet includes a row entered as an example and information in the column name that indicates if a drop-down menu is to be used.

4.2.2 Data Elements to be Collected in the AI System Inventory Worksheet:

- State entity/agency information:
  - State entity/agency name: The name of your state entity/agency. This can be selected from a drop-down menu.
- AI system details:
  - AI system manufacturer and product name: Information identifying the AI system's manufacturer and product name, e.g., SampleAI is the manufacturer of the NoNameSystem product.
  - AI capability: Primary capability category describing the ability of the AI system to perform a function, with an additional field for a description, if "other" is selected as a capability. The primary capability field will have drop-down menu options to choose from.
    - Please see Appendix A of this document
  - Specific use case description: A brief narrative describing the purpose and uses of the AI system within the SE.

4.3 Review, Validation, and Public Accessibility

ITS will review submissions for accuracy and completeness. This process may involve requests for additional information or clarification. If further information or clarification is needed, ITS will reach out to the primary and secondary contact identified on the AI system inventory Excel workbook cover page.

ITS will ensure that information from the AI system inventory collection is reported to the public, respecting confidentiality and integrity. This will include publishing the selected information from the inventory on the Open Data NY public platform, in accordance with section 103-e of the STL. When submitting their AI system inventory Excel workbook, SEs should provide a detailed explanation, in accordance with Articles 6 and 6-A of the Public Officers Law, as to why they believe certain information contained within the workbook cannot be released publicly at the time of submission. ITS and the SE will work together to assess whether publication of this information is practicable until such time as a final decision is made; however, SEs are still required to submit the information to ITS to initiate this review process.

ITS may withhold certain information from the AI system inventory collection pursuant to Article 6 or 6-A of the Public Officers law, including but not limited to, if it is deemed that disclosure of the information would jeopardize the capacity to guarantee the security of information technology assets, would interfere with a law enforcement investigation or reveal criminal investigative techniques or procedures, or would endanger the life or safety of a person.

4.4 Confidentiality and Assistance

Information within the AI system inventory will be treated with the utmost confidentiality and used solely for AI governance, risk management, and policy compliance purposes.

For assistance or questions regarding the AI system inventory Excel workbook or submission process, please contact the ITS Chief Data Office at cdo@its.ny.gov.

5.0 Compliance

This guideline shall take effect upon publication. ITS may amend its guidelines at any time.

6.0 Definitions of Key Terms

Except for terms defined in this policy, all terms shall have the meanings found in the ITS Glossary.

7.0 Contact Information

Submit all inquiries, requests, and the completed AI system inventory Excel workbook to:

Chief Data Office

8.0 Revision History

This guidance document should be reviewed consistent with the requirements set forth in ITS-P24-003 Process for Establishing Information Technology Polices, Standards and Guidelines.

Date	Description of Change	Reviewer
03/04/2025	Issued Guidance	CDO

9.0 Related Documents

Appendix A – AI System Capability Categories and Descriptions

AI system capability categories	AI system capability descriptions (Capability: The ability of the AI system or tool to facilitate or assist with the following)
Agriculture	Monitoring crop health, optimizing resource usage, and predicting yields
Assistive Technology	Helping individuals with disabilities in various tasks
Automation	Streamlining repetitive tasks and processes
Code Assistance	Optimizing, debugging, generating, or testing code more efficiently and effectively
Content Creation	Creating various forms of content, such as text, images, music, etc. (ex: GenAI like ChatGPT, DALL-E, or Claude)
Customer Service/Conversational AI	Improving customer interactions and satisfaction through automated support systems (ex: Virtual Assistant Chatbot)
Document AI/Intelligent Document Processing (IDP)	Assisting humans in extracting, classifying, or analyzing information from various types of documents.
Education	Personalizing learning experiences, providing feedback, and automating administrative tasks
Energy	Optimizing energy consumption, managing power grids, and analyzing demand
Environmental Protection	Monitoring pollution levels, predicting potential environmental changes, and facilitating management of natural resources
Finance	Analyzing market trends and managing investments
Fraud Detection	Identifying fraudulent activities or transactions (ex: Financial fraud, such as Medicaid fraud detection)
Health Care Diagnostics	Diagnosing diseases, predicting patient outcomes, and personalizing treatment plans
Image Recognition/Computer Vision	Identifying objects, people, or features within images or videos

AI system capability categories	AI system capability descriptions (Capability: The ability of the AI system or tool to facilitate or assist with the following)
Legal	Analyzing legal documents, predicting case outcomes, and automating routine legal tasks
Manufacturing	Optimizing production processes, predicting equipment failures, and improving quality control
Monitoring and Surveillance (Cyber)	Continuously observing data to detect anomalies or potential issues (ex: EDR, MDR)
Natural Language Understanding	Extracting meaning and intent from human language (ex: Summarizing online meetings, language translation, etc.)
Process or Operation Optimization	Fine-tuning processes and allocating resources more effectively
Personalization	Tailoring products, services, or experiences to individual preferences
Prediction/Predictive Analytics	Forecasting future events or outcomes based on historical data
Research and Development	Scientific research and innovation (Ex: Assisting scientists in analyzing unstructured data to discover new phenomena or relationships)
Sentiment Analysis	Determining the sentiment or opinion expressed in text data
Speech/Text Recognition	Converting spoken language into text or text into spoken language
Transportation	Optimizing traffic flow, managing logistics, and enabling autonomous vehicles
Other
