TS-DBS-009: Database Decommissioning

Document ID	TS-DBS-009
Title	Database Decommissioning
Executive Sponsor	Database Services Management, DBS Manager
Issuing Authority	Governor's Office of Information Technology (OIT)
Applies to	OIT, state agencies as defined in C.R.S. 24-37.5-101(28), and vendors contracted by OIT or its stakeholders.
Instrument Type	Standard
Version	6.0
Effective Date	05-19-2018
Last Updated	07-01-2026

Purpose

This standard is issued under the authority of the Governor's Office of Information Technology (OIT)(C.R.S. 24-37.5, et seq.), Office of Enterprise Architecture (Rule 8 CCR 1501-7).

The purpose of this document is to communicate the standards that the Governor's Office of Information Technology (OIT) has developed in order to provide enterprise standard configurations for Database Decommissioning. Standards are based on a best-of-value decision assessment involving multiple factors, such as stakeholder needs, hardware configurations that are serviced and supported by OIT, as well as operational and security best practices guidelines.

Scope

These standards apply to OIT, state agencies as defined in C.R.S. 24-37.5-101(28) and vendors contracted by OIT or its stakeholders as a means to enforce technology standardization and assist in making the usage, support, and/or purchase of technologies more consistent and efficient.

The standards assigned and prescribed by this document, instituted for use by the approval of the OIT Architecture Review Board (ARB), should be used to govern purchase and deployment decisions deemed as “go-forward” or “net-new” strategies or implementations, and are not intended for use as retroactively enforceable mandate or policy for immediate conformance (especially in cases where cost implications may be prohibitive). This standard shall in no way require OIT to support any products and services not approved by OIT.

For the purpose of enforcement, this standard is rated CAT 2 according to the Enforcement Category Chart.

Roles and Responsibilities

Enterprise Architecture - Chief Enterprise Architect

- Chairs and conducts business of the Architecture Review Board (ARB).
- Update effective date and/or last review date.
- Publish the ARB approved Standard to the OIT public facing website.

Architecture Review Board (ARB)

- Engage stakeholders and subject matter experts to determine standard.
- Review/Approve Standard (this document).

Database Services Management - DBS Manager

- Owner of Standard.
- Engage stakeholders and subject matter experts to determine standard.
- Update document standards and version number.
- Present to the Architecture Review Board for approval and adoption.

Database Services Management

- Responsible for enforcement and approval of changes of policies, standards, guidelines, procedures.

Database Services Database Administrator

- Responsible for knowing and adhering to policies, standards, guidelines, procedures as part of the job description.

Additional Assignments

All OIT staff are responsible to be aware of the existence of this (and all) standard(s) and its purposes of authority and governance in support of OIT's statutorily mandated mission in service of Colorado State Government affairs.

Standards

- Decommissioning of production databases requires business approval and an approved Service Hub Change ticket.
- Decommissioning of non-production databases does not require business approval but does require an EA manager approved ServiceHub Change Request ticket.
- ServiceHub Change Requests will require the following information:
    - Decommissioning date and time
    - Specific database servers on which databases reside
    - Specific database instances in which databases reside
    - Specific databases to be decommissioned
- Databases to be decommissioned will be made unavailable to users on date and time of decommissioning and prior to archive and backup.
- A consistent backup will be performed at the decommission time and date.
- Database backups will be stored in the designated storage area for 30 days.

- DBS will submit a Server Decommission Request form to the Server Team if the last database on the server is decommissioned.

Variance and Exception Process

Requests for variances from any provisions with this Standard must be requested using the Technical Standard End User Exception Request Procedure.

The purpose of the Exception Request process is to address business or technical reasons for the inability to adhere to one or more requirements in this standard.

Requests for exceptions should include compensating controls, that is, processes, technologies, or procedures proposed used to mitigate any deviation from the standard requirement. The Secure Configuration Exception Request form, Secure Configuration Exception Request (template effective 17-May-2024) DO NOT EDIT - MAKE A COPY.docx must be submitted to oit_ciso@state.co.us. Exception requests will be processed and recommended for approval, conditional approval, or denial.

Definitions

Standard: A rule that specifies a particular course of action or response to a given situation. Standards are mandatory directives to carry out management's policies and are used to measure compliance with policies. Standards serve as specifications for the implementation of policies and are designed to promote implementation of high-level organization policy rather than to create new policy in themselves.

Database Management system (DBMS): A software application that interacts with end-users, other applications, and the database itself to capture and analyze data.

Database Server: A virtual or physical server capable of running the DBMS software.

Database Instance: A set of background database processes/threads and a shared memory, which is memory that is shared across those threads/processes running on a single database server.

Production Database: State Agency database used for production purpose to conduct State business.

Non-Production Database: State Agency database used for non-production purpose such as development, testing, staging, demonstration or training.

Backup: A restorable set of data.

Archive: A restorable set of data created for long term storage.

User: Employees of OIT and supported State agencies, and their respective stakeholders that use DBS supported databases.

Servicehub Ticket: Service ticket entered through the online OIT Servicehub Desk Management.

EA: Enterprise Application development group responsible for application development.

Designated Storage Area: Device space reserved for hosting database backups and archives.

OEA (Office of Enterprise Architecture): The Office of Enterprise Architecture was formed as an office under OIT by Governor's Rule 8 CCR 1501-7.

OIT (Office of Information Technology): The Governor's Office of Information Technology was created and governed by C.R.S. 24-37.5, et seq.

Exception request: A document requesting an exception to a recognized standard, requiring a business or technical justification for granting the exception. Typically an exception request is subject to review and approval by an authority in the area.
