TS-INF-002: End User Enterprise Software

Document ID	TS-INF-002
Title	End User Enterprise Software
Executive Sponsor	Deskside Support Services, Enterprise Deskside Support Services Manager
Issuing Authority	Office of Information Technology (OIT)
Applies to	Any software configurations for end-user PC/client x86 and x64-based hardware purchased and supported by OIT and OIT-supported agencies (per C.R.S. Title 24, Article 37.5).
Tier	Standard
Version	4.0
Effective Date	05/28/2015
Last Updated	07/17/2026

1. Purpose

The purpose of this document is to communicate the standards that the Governor's Office of Information Technology (OIT) has developed with the intent of providing enterprise standard software configurations for end-user PC/client x86-based hardware. Standards are based on a best-of-value decision assessment involving multivariate factors, such as state employee needs, hardware configurations that are serviced and supported by OIT, as well as operational and security best practices guidelines.

2. Scope

These standards apply to any software configurations for end-user PC/client x86 and x64-based hardware purchased and supported by OIT and OIT-supported agencies (per state statute Article 37.5 Title 24). This standard shall be used by employees of OIT, agencies supported by OIT, and vendors contracted by OIT or its stakeholders, as a means to enforce technology standardization and assist in making the usage, support, and/or purchase of technologies more consistent and efficient.

Standards instituted for use by approval of the OIT Architecture Review Board (ARB) govern purchase and deployment decisions deemed "go-forward" or "net-new", and are not intended as a retroactively enforceable mandate for immediate conformance, especially where cost implications may be prohibitive.

3. Roles and Responsibilities

Enterprise Architecture - Chief Enterprise Architect

- Chairs and conducts business of the Architecture Review Board (ARB).

- Updates effective date and/or last review date.
- Publishes the ARB-approved Standard to the OIT public-facing website.

Architecture Review Board (ARB)

- Engages stakeholders and subject matter experts to determine the standard.
- Reviews and approves the Standard (this document).

Deskside Support Services - Enterprise Deskside Support Services Manager

- Owner of Standard; engages stakeholders and subject matter experts to determine the standard.
- Updates document standards and version number.
- Presents to the Architecture Review Board for approval and adoption.

All OIT staff are responsible for being aware of the existence of this (and all) standard(s) and its purposes of authority and governance in support of OIT's statutorily mandated mission in service of Colorado State Government affairs.

4. Standards

These standards define the minimum version in use for all enterprise software deployed to end-user workstations as defined in TS-INF-001, to provide consistently productive deployments, security practices, and support across the agencies.

Operating System (OS)

- Microsoft Windows 10 Enterprise (exception only)
- Microsoft Windows 11 Enterprise

Productivity Suite

- Microsoft Office 2016 or later versions supported by Microsoft (end of life for Office 2016 and Office 2019 is August 2025).
- Microsoft Apps 365 (as-needed basis). MS OneDrive, OneNote, Yammer, and Teams are excluded in lieu of standard Google offerings.
- Google Workspaces (formerly Google Apps for Government), latest version — includes email, calendar, docs, sheets, forms, presentations, sites, drawings, Google Drive, Google Keep, Google Meet, and Google Chat.

Browser

- Chrome, latest major version
- Microsoft Edge, latest major version

Endpoint Security

- CrowdStrike, latest version (anti-malware, threat intelligence, local firewall security)
- Tenable, latest version (compliance, vulnerability scanning, and security hardening)
- Microsoft BitLocker (drive encryption)
- Microsoft LAPS

PDF Reader

- Adobe Reader, latest major version

Other Utility Software

- Java Runtime Environment, latest version

- Cisco AnyConnect (exception only), Secure Access (formerly NetMotion), and Global Protect (NGVPN) VPN
- Webex

5. Variance and Exception Process

- Legacy operating systems: New computers being rolled out should not have older OS versions than listed in Section 4. Old Windows versions can only remain on systems identified and approved using the Security Exception Request Form.
- Apple macOS: Recognized as a supported but non-standard product; exists as an exception requiring manager sign-off.
- Chrome OS: Recognized as a supported but non-standard exception requiring manager sign-off; any Chrome OS devices must have an enterprise license for Google Management.
- Any variances to the standards in Section 4 must be requested using the Security Exception Request Form.
- Freeware and/or open-source software may only be installed on systems identified and approved using the Security Exception Request Form.

7. Definitions

Enterprise Software: The default software programs loaded onto all PC/Client computers regardless of agency.

Operating System (OS): The most defining characteristic of a PC/Client user environment, providing the visual interface for an end user to do their work.

PC/Client: Any workstation device that can be described as a Desktop, Laptop, or Tablet.

x86 / x32 / x64: Microprocessor family based on Complex Instruction Set Computing (CISC) architecture, commonly sourced from Intel and AMD by OEM suppliers.

Freeware: Applications offered at no cost in lieu of licensed software. Because it may be copyrighted, reuse in programming may not be permitted.

Open Source: Software released under a license granting users rights to use, study, change, and distribute the software and its source code, for any purpose.
