Chief Information Officer &
Executive Director
Governor's Office of Information Technology

TS-INF-012: Multifunction Device/Printer Configuration Standard

Document ID	TS-INF-012
Title	Multifunction Device/Printer Configuration Standard
Executive Sponsor	Deskside Services Management Team (DSS)
Issuing Authority	Office of Information Technology (OIT)
Applies to	OIT, state agencies as defined in C.R.S. 24-37.5-101(28), and vendors contracted by OIT or its stakeholders.
Tier	Standard
Version	3.0
Effective Date	01/29/2025
Last Updated	10/16/2025

1. Purpose

This standard is issued under the authority of the Governor's Office of Information Technology (OIT) (C.R.S. 24-37.5, et seq.) and the Office of Enterprise Architecture (Rule 8 CCR 1501-7). It communicates the standards OIT has developed to provide enterprise standard configurations for multifunction printer (MFP) devices, based on a best-of-value decision assessment involving stakeholder needs, hardware configurations serviced and supported by OIT, and operational and security best practices.

The ultimate purpose of this standard is to describe the minimum requirements for designing, installing, securing, monitoring, maintaining, protecting, and decommissioning multifunction printer devices.

2. Scope

These standards apply to OIT, state agencies as defined in C.R.S. 24-37.5-101(28), and vendors contracted by OIT or its stakeholders, as a means to enforce technology standardization and assist in making the usage, support, and/or purchase of technologies more consistent and efficient.

Standards instituted for use by approval of the OIT Architecture Review Board (ARB) govern purchase and deployment decisions deemed "go-forward" or "net-new", and are not intended as a retroactively enforceable mandate for immediate conformance, especially where cost implications may be prohibitive.

3. Roles and Responsibilities

Enterprise Architecture - Chief Enterprise Architect

- Chairs and conducts business of the Architecture Review Board (ARB).
- Updates effective date and/or last review date.
- Publishes the ARB-approved Standard to the OIT public-facing website.

Architecture Review Board (ARB)

- Engages stakeholders and subject matter experts to determine the standard.
- Reviews and approves the Standard (this document).

Deskside Services Management Team (DSS)

- OIT Owner of Standard; updates document standards and version number.
- Presents to the Architecture Review Board for approval and adoption.

Secure Office Print Ecosystem (SOPE) - Manager

- Engages stakeholders and subject matter experts to determine the standard.
- Engages with the DSS Team to provide updates to the standard before revision.

All OIT staff are responsible for being aware of the existence of this (and all) standard(s) and its purposes of authority and governance in support of OIT's statutorily mandated mission in service of Colorado State Government affairs.

4. Standards

MFP Technical Controls

- Network Access: The MFP device must not be accessible from the open, untrusted internet.
- Hard Drive Encryption: MFPs must support encryption — TLS 1.2 or greater for data in transit, and AES-256 for data at rest.
- Device Security Configuration: Must comply with the CIS Benchmark for Printing Devices and current data classifications (FTI, HIPAA, etc.).
- Administrative Security: Administrative web servers must be hardened, password protected, and patched regularly (at least every 90 days).
- USB Usage: Restricted to approved devices, authorized via the SOPE management exception request form.
- Network Placement: Must be on an approved and managed dedicated print VLAN.
- Logging: Print spooler logging of all submitted requests must be enabled and logs reviewed regularly.
- Data Wipe: The MFD must securely auto-wipe all data nightly at the agency-specific assigned time.
- Wi-Fi Capability: The Wi-Fi capability on MFPs must be disabled.
- Document Security: Must be capable of password protecting documents and data.
- Energy Efficiency: Must be energy efficient or Energy Star compliant.
- Bi-Directional Communication: Must be configured to disable bi-directional communication to external networks.

The following protocols must be disabled on all MFPs: AMF; AirPrint; Bluetooth; FTP; HTTP; IPP; IPP Fax Out; IPPS; Kerberos; LLMNR; Mopria Discovery; MDNS; NetBIOS; NPAP; NFC; NTP; POP3; Proxy

Server; Remote Services; Secure Web Scan; SIEM (direct protocol); SLP; SMB (all versions); Telnet; TFTP (configuration file); Thin Print Client; Universal Print; Web Scan; Wi-Fi Direct; WINS; WSD; and XMLNT.

5. Exceptions and Variance

Requests for variances from any provision of this standard must be requested following the Secure Configuration Exception Request process. The Exception Request process addresses business or technical reasons for the inability to adhere to one or more requirements. Requests must include compensating controls.

The Secure Configuration Exception Request form must be submitted to oit_ciso@state.co.us (the form may be requested by emailing DPA_idscopiers@state.co.us). Exception requests will be processed and recommended for approval, conditional approval, or denial.

7. Definitions

Multifunction printer (MFP): An all-in-one office machine that incorporates the functionality of multiple devices in one.

Virtual local area network (VLAN): Any broadcast domain that is partitioned and isolated in a computer network at the data link layer.

Wi-Fi: Any wireless local area network (WLAN) product based on IEEE 802.11 standards.

Exception request: A document requesting an exception to a recognized standard, requiring a business or technical justification, subject to review and approval by an authority in the area.
